H04L012/28

ABSTRACT:

PURPOSE: To prevent delay in the circulation by using
circulation management
information so as to allow a server to manage a circulation
mail within
prescribed time limits.

CONSTITUTION: At first a client 3-1 generates a
circulation mail 7 and sends
it to a mail box 5 of a server 1, then the server 1 stores
circulation
management information 8 and a copied circulation mail 7* to
a memory 6. The
circulation mail is sent to a succeeding client 3-2. Then
the circulation
management information 8 is referenced by the server 1 and
when the circulation

mail is returned from the client 3-2, the circulation mail is sent to a succeeding client 3-3. Moreover, when the circulation mail is not returned by the termination time, the copied circulation mail 7* is sent to the succeeding client 3-3 without awaiting the return to prevent delay in the circulation.
